

Aniruddh Patil

Full Stack Developer · React.js · Python · Node.js · AWS · Microservices · REST APIs

aniruddh1995@yahoo.com | github.com/15aniruddh | [Portfolio](#) | Bengaluru, India | +91-94230 63703

Summary

Full Stack Developer with 3+ years of experience designing, building and deploying scalable web applications end to end — from **React.js** frontends to **Node.js** and **Python** backends, deployed on **AWS**. Proven track record shipping production features across the full stack for a live multi-tenant SaaS platform: serverless REST APIs, secure authentication (**JWT**, **RBAC**) and UI components, with measurable impact including a **10× reduction in API latency** via Redis caching. Hands-on with **AWS Lambda**, **API Gateway**, **ECS**, **CloudFormation**, **S3**, **CloudWatch** and modern DevOps practices (**CI/CD**, **Docker**, **Git**). Comfortable owning a feature end to end — from UI and API design through production deployment and monitoring — in fast-paced, high-availability environments.

Work Experience

Software Engineer · Bengaluru

Jun 2023 – Present

Horizon Broadband Pvt. Ltd.

- Build and maintain full-stack features for **Vivre**, a live **multi-tenant SaaS** platform, pairing **Node.js** services on **AWS Lambda** and **API Gateway** with the platform's front-end experience under high-availability requirements.
- Cut API response times from 2–4 s to ~150 ms — a 10× latency improvement — by designing and integrating a **Redis** caching layer, also eliminating redundant **Lambda** invocations and lowering compute spend.
- Implemented **JWT**-based authentication and **role-based access control (RBAC)**, giving fine-grained, **tenant-aware** permissions across both the UI and the **REST APIs**.
- Architected **HZ-CMS**, an adapter-layer **SDK** that normalizes heterogeneous content-partner responses into a single unified **API contract** — removing per-partner platform changes and cutting new-partner integration time.
- Built an **image optimization pipeline** (PNG/JPG → **WebP**) that improved page-load performance and reduced **CDN** bandwidth costs platform-wide.
- Wrote a **Python** migration service that ingests records from 30 content-partner APIs into the production database.
- Provisioned and maintained infrastructure with **AWS CloudFormation**, **ECS**, **S3**, **CloudFront** and **CloudWatch**, owned the **CI/CD** pipelines for deployment, and used **AWS Glue/Athena** for data processing and observability.

Frontend Intern · Mumbai

Dec 2022 – Mar 2023

Faclon Labs

- Developed and refined UI components using **Angular 2**, resolving bugs and improving layout consistency across production dashboards used by operations teams.

Projects

Vivre · Node.js, Lambda, API Gateway, Redis, JWT, WebP

Aug 2023 – Present

- Full ownership of a live multi-tenant SaaS product: serverless CRUD APIs, auth, caching layer, and media pipeline powering the front-end experience.

HZ-CMS · Node.js, Adapter Pattern, REST

Nov 2024 – Present

- SDK that normalizes heterogeneous partner responses into a single contract — improving extensibility and cutting new-partner integration time significantly.

DRM-Go · Go, REST APIs, CleverTap API

Sept 2025 – Present

- Digital Rights Management project — built 2 new REST APIs in Go to delete users via CleverTap API integration, supporting compliance-driven user data removal.

Data Migration · Python, REST APIs, Database Migration

Dec 2025 – Present

- Python script to fetch records from 30 content partner APIs and migrate them into the production database.

Personal Projects

LifeCare Portal [\[live\]](#) · Python, FastAPI, React (Vite), SQL, AWS CloudFront, ACM, CI/CD

Aug 2023 – Present

- Built a **hospital management and healthcare information platform**, conceived during the COVID-19 pandemic, that helps users locate nearby hospitals and check real-time **bed** and **oxygen availability** — cutting the time needed to find an available facility.
- Developed a **FastAPI** backend over a **SQL** database serving a **React + Vite** front end, and deployed it on a custom domain behind **AWS CloudFront** with **ACM**-issued TLS and an automated **CI/CD** pipeline.

PDF Q&A [\[live\]](#) · Python, React.js, RAG, Gemini LLM, Vector Embeddings, Vector Database

Aug 2026 – Present

- Built a **retrieval-augmented generation (RAG)** application that answers natural-language questions over user-uploaded PDFs and returns **cited source passages**, keeping answers grounded and verifiable.

Technical Skills

Frontend	React.js, Next.js, Angular 2, JavaScript, TypeScript, REST API Integration
Backend	Node.js, Express.js, REST APIs, Serverless Architecture, Microservices, Python, Java, Go
Languages	JavaScript, TypeScript, Python, Java, Go, SQL
Databases	MongoDB, PostgreSQL, MySQL, DynamoDB, Redis, NoSQL, SQL
AWS	Lambda, API Gateway, S3, ECS, CloudFormation, CloudFront, CloudWatch, Glue, Athena
DevOps & Tools	Docker, CI/CD, Git, GitHub, GitLab, Bitbucket, Shell Script, ELK (Elasticsearch)
AI & Other	Prompt Engineering, Generative AI (ChatGPT, Claude, Cursor)
